Professional Summary

Computer Science Engineering student with a strong interest in Data Scientist and Artificial Intelligence with strong foundation in Python, Machine Learning, and Data Analytics. Experienced in building and deploying ML models, performing data cleaning, exploratory data analysis, and visualization to derive actionable insights. Skilled in Python (Pandas, NumPy, Scikit-learn), SQL, and data visualization tools with hands-on experience in classification, NLP, and model evaluation, Deep Learning.

Education

Bachelor of Technology in Computer Science Engineering, Mumbai University 2022 – 2026
A.P.Shah Institute Of Technology, Thane
CGPA: 7.0

HIGH SECONDARY SCHOOL 2020 – 2022
Ramniranjan Jhunjhunwala College, Ghatkopar
Percentage: 54%

SECONDARY SCHOOL 2007 – 2020
South Indian English School, Diva
Percentage: 87%

Technical Skills

Programming: Python, SQL, Java, JavaScript

AI/ML: Supervised Learning, NLP, Feature Engineering, Model Evaluation, Deep Learning

Cloud & Tools: AWS Basics, Git, GitHub

Libraries: Scikit-learn, Pandas, NumPy

Deployment: Flask, Streamlit, Gradio

Visualization: Matplotlib, Seaborn, Tableau, Power BI

Concepts: Data Structures Algorithms (Basic), ML Pipelines

Projects

SecureScope – AI-Powered Web Vulnerability Assessment [Link](#)
Python, OWASP ZAP, ML, Google Gemini API

- Built a cybersecurity tool for automated web vulnerability scanning and AI-driven report generation.
- Integrated OWASP ZAP for vulnerability detection.
- Applied ML filtering to reduce false positives and prioritize risks.
- Generated structured PDF reports with actionable insights.

LifeOS – AI-Powered Productivity & Life Management System [Link](#)
Python, Streamlit, Multi Agents

- Developed an AI-based system to manage daily tasks, goals, and personal productivity in a centralized platform.
- Integrated intelligent task prioritization and reminder features for efficient time management.
- Designed an interactive dashboard for tracking habits, goals, and performance metrics.

ML-Based Outfit Recommendation System [Link](#)
Python, Flask, Random Forest

- Built a multi-class classifier achieving 92–94% accuracy.
- Developed a Flask application for real-time outfit recommendations.
- Evaluated model performance using confusion matrix and cross-validation.

Certifications

- British Airways – Data Science Job Simulation (Forage)
- Oracle Cloud Infrastructure Data Science Professional
- Quantum Data Analytics Virtual Internship

Strengths

- Good analytical and troubleshooting skills
- Strong communication and teamwork abilities

Achievements & Activities

- Solved coding problems on LeetCode.
- Participated in technical workshops and virtual internships.

Languages

English, Hindi, Marathi, Odia
